

## A short list of really good books on a variety of topics:

### Long run prosperity

- "The Rise and Decline of Nations", by Mancur Olson (1982)
  - *An intriguing and insightful view on why nations experience decline.*
- "Plagues and Peoples", by William McNeill (1977)
  - *Characterizes history as a biological process, where aggregate outcomes are heavily influenced by 'macro-' and 'micro-' pathogens. Fascinating.*
- "Guns, Germs, and Steel", by Jared Diamond (1999)
  - *Some intriguing hypotheses on geography's role in economic development.*
- "The Elusive Quest for Growth" by William Easterly (2002)
  - *What we've learned from the last 50 years of studying and trying to help developing nations achieve faster economic growth. The record is unambiguous -there are very few success stories. Major theme: people respond to incentives.*
- The Rise and Fall of American Growth, Robert J. Gordon (2016)
  - *Gordon knows how to make a case.*
- "The White Man's Burden: why the West's efforts to aid the Rest have done so much ill and so little good" by William Easterly (2006)
  - *Why most aid programs have failed, are failing, and will continue to fail. Easterly is not against helping the needy; he simply notes that most efforts have done more harm than good. The reasons will probably surprise you. This book is a must read.*

### History, Politics, Current Events

- The Fifth Risk, Michael Lewis (2018)
  - *A truly alarming peek at the Trump transition.*
- Educated, Tara Westover (2018)
  - *It is impossible to read this and not be simultaneously appalled at cracks in our national ability to protect our children, and amazed at the sheer luck that can happen despite all odds.*
- 12 Rules for Life, Jordan Peterson (2018)
  - *Controversial, but well-argued views*
- Homo Deus: A brief history of tomorrow, Yuval Noah Harari (2015)
  - *One possible scenario for the future that we should wake up to.*
- Sapiens: a Brief History of Human Kind, Yuval Noah Harari (2011)
  - *Sweeping (and weeping) account of Homo Sapiens presence on planet earth.*
- "The Day the Universe Changed", by James Burke (1995)
  - *Enlivens world history by isolating particularly pivotal events that changed the course of history.*
- "American Caesar", by William Manchester (1978)

- *Biography of Douglas MacArthur. Especially riveting account of MacArthur's role in the Pacific theater of WWII.*
- "From Beirut to Jerusalem", by Thomas Friedman (1989)
  - *A good introduction to the history of Israeli-Palestinian 'issues'.*
- "Longitudes and Attitudes", by Thomas Friedman (2002)
  - *A collection of Friedman's New York Times columns about the U.S. and Middle East developments in the two years immediately following 9/11/01.*

### Finance & Economics

- "Everybody Lies", Seth Stephens-Davidowitz ) (2017)
  - *What Google searches can tell us about who we really are as a nation.*
- "The End of Alchemy: Money, Banking and the Future of the Global Economy, by Mervyn King (2016)
  - *I will simply quote Michael Lewis on this one: "If [The End of Alchemy] gets the attention it deserves; it might just save the world." Michael Lewis, Bloomberg View*
- "After the Music Stopped", by Alan Blinder (2013)
  - *Blinder recounts the details of the Global Financial Crisis and recovery in a compelling time-sequence of events. He recounts the what, and the why as well as some observations on how attempts to prevent future crises are already being undermined by market participants. He offers an explanation for the dissent from both sides of the political spectrum, and lays much of the blame at policymaker's (both parties) inability to effectively communicate.*
- "The Return of Depression Economics", by Paul Krugman (1999)
  - *Krugman does a good job of showing how a few powerful ideas can go a long way in understanding the economics behind events; an excellent telling.*
- "Naked Economics: Undressing the Dismal Science", by Charles Wheelan (2002)
  - *This is a terrific book. It's economics in plain English by an excellent writer (Wheelan is an erstwhile correspondent for The Economist). He divides the book into chapters reflecting really the important ideas in economics (the power of markets; the importance of incentives; good (& bad) government; productivity and economic growth; information; politics; finance; monetary policy; and trade and globalization). Some great one-liners: the S&L executives being members of the 3-6-3 club (borrow at 3%, lend at 6%, and arrive at the golf course at 3pm); macro forces are like the tides, micro forces determine the quality of the boat you're in; Glenn Loury explains why affirmative action generates feelings of reverse discrimination way out of proportion to reality.*
- "Freakonomics", by Steven Levitt and Stephen Dubner (2005)
  - *Good book; dumb title.*
- "Stocks for the Long Run" by Jeremy Siegel (1994)
  - *A good description of the equity premium puzzle in the 1st chapter.*

### Aging in America

- "Being Mortal: Medicine and What Matters in the End", Atul Gawande (2014)
  - *This book takes on a difficult and delicate subject we are inclined not to think too much about. Correspondingly, this raises questions about why we have/tolerate sterile, dismal, repugnant 'homes' for our elderly, and why the cost of care in the U.S. is so large. The conversation will only become more important.*

### Travel and Nature

- The Life of Birds, by David Attenborough (1998)
  - *David Attenborough communicates well the amazing adaptations of birds around the world; really makes you want to experience some of these for yourself.*
- Richard Halliburton's Complete Book of Marvels (1941)
  - *Richard Halliburton led an amazing life and he wrote with verve and simplicity of style that is truly enchanting.*
- Riding the Hulahula to the Arctic Ocean: A Guide to 50 Extraordinary Adventures for the Seasoned Traveler, by Don Mankin and Shannon Stowell (2008)
  - *These 50 trips really take you there.*
